1372. Longest ZigZag Path in a Binary Tree

Hint

Medium 2.7K 53

Companies

You are given the `root` of a binary tree.

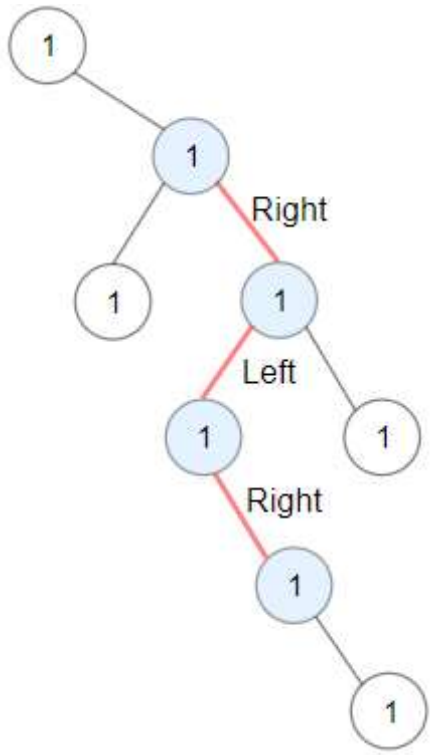
A ZigZag path for a binary tree is defined as follow:

- Choose **any** node in the binary tree and a direction (right or left).
- If the current direction is right, move to the right child of the current node; otherwise, move to the left child.
- Change the direction from right to left or from left to right.
- Repeat the second and third steps until you can't move in the tree.

Zigzag length is defined as the number of nodes visited - 1. (A single node has a length of 0).

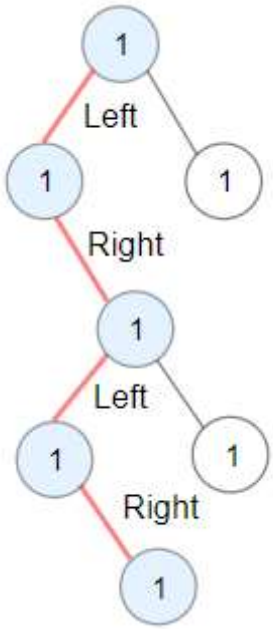
Return *the longest **ZigZag** path contained in that tree*.

Example 1:



Input: root = [1,null,1,1,1,null,null,1,1,null,1,null,null,null,1,null,1]
Output: 3
Explanation: Longest ZigZag path in blue nodes (right -> left -> right).

Example 2:



Input: root = [1,1,1,null,1,null,null,1,1,null,1]
Output: 4
Explanation: Longest ZigZag path in blue nodes (left -> right -> left -> right).

Example 3:

Input: root = [1]
Output: 0

Constraints:

- The number of nodes in the tree is in the range $[1, 5 * 10^4]$.
- $1 <= Node.val <= 100$
